

## SOLVAir Solutions ... A new start, fresh possibilities!

A brand New Year offers a fresh beginning, and often, a new way of looking at what the future holds. And right now, the future is looking bright. With air pollution levels falling to new lows over the past decade, we are headed in the right direction. These positive strides have been possible due to collaboration between industry, regulators and technological innovations. As the calendar page turns ... 2018 offers all of us a "breath of fresh air"!

To continue this positive direction, SOLVAir Solutions could be the resource you need to achieve regulatory compliance regarding acid gas mitigation. Whether looking to postpone a plant's retirement; assistance with technology and product choices; or looking for cost-effective product implementation, we offer both the experience and knowhow to assist you in meeting these challenges.

Interested? Call me today at 800.765.8292 for a one-on-one discussion about air pollution control, and what the future holds in store.
