Good news! The untold success story of air pollution control!

The steady progress in air quality improvement in the U.S. since 1970 is an untold success story. SOLVAir Solutions, together with its customers and partners, is one of several companies that have contributed to this achievement. We have worked diligently for decades to help industries from all end use segments reduce acid gas emissions such as SO₂, SO₃ and HCl in order to meet regulatory compliance.

According to the EPA, there has been a steady decline in the six air pollutant criteria. The graph illustrates the decline in sulfur dioxide (SO₂) from 1970 through 2010.

Our work is not done, and our dedication is unwavering. Contact me today at 303.489.9183 to see how we can help your company gain compliance.

Changes in Emissions and Concentrations of Sulphur Dioxide (SO₂) in the United States from 1970-2010
